"claimed C-terminal tail to facilitate crosslinking of two sFv polypeptides"

```
The present invention relates to movel mucleic acid sequences encoding light and heavy chain variable regions of the antibody 31.1 Sequences of the invention are useful in expressing chimerised 31.1 antibodies, which can be used for treating pancreatic cancer or for diagnosing pancreatic action carctinems. They are also used in antibody herzpy. The presequence is characteric 31.1 antibody heavy chain variable region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to methods of increasing production of a considerabil hinding protein, especially a simple chain antibody, can generating hinding protein, especially a simple chain antibody. Considerability of the protein that are not and stimulates can viral transcription activator protein that are no and stimulates can viral promoter controlling the expression of but an end of the protein can consider the end of the sequence ALT78873, or an ENA sequence able to promote the adenoviral Val gene (ALT78875).

Constructed by the sequence ALT788761. The coding sequence of the sequence presented here is the amino acid sequence of the sequence presented here is the amino acid sequence of the sequence by sequence of the sequence and the protein from the memolional antibody 52005 (ALT78880) or from Paci (ALT78881).

Constructed by sequence and sequence of the memolional antibody 52005 (ALT78880) or from Paci (ALT78881).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

```
The present sequence represents an anti-cetbs-2 sPv, cerbs-2 is an antisen that is overexpressed on the surface of tumour cells, an antibody designated 741F78 binds cerbs-2 variable heavy and light sequences of antibody 741F8 are connected, together with a linker, to produce the present single chain ry gene, but ceabs-2 sPv exemplifies the invention, biners of the single chain Pv gene, but contains the contrained for targeted delivery of drugs or imaging agents (e.g. cytozounes drugs or the SPM-technetism) to antigen expressing cells, particularly for treatment or diagnosis of tumours (especially of overy or breast).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nuclaic acid encoding single-chain Fv fragment specific for antigens and having C-reminal tail for crosslinking to form dimer with improved pharmacokinetic properties, used to deliver drugs and imaging agents, especially to tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 1; Columns 27-30; 29pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The heavy chain variable region (AAW06217) of mouse monoclonal antibody RM10 is the product of a cDNA clone (ARJ442) isolated from a RM10 hybridona cDNA library. MAD RM10 (IgGI) binds to an antigen that is expressed on the surface of human colon, stocach, pencreas and oseophagus carcinomas, but not on most normal adult tissues. The heavy chain and light chain variable regions (see also AAW06218) of RM10 can be Linked to human constant regions and expressed in transformed host cells. Novel mouse-human chmeric amenicative (see also AAW06218) to RM10 can be produced that have agentificity to Maman tumour antigens for use in the treatment and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the heavy chain variable region of murine anthody 2010. The sequence was used to create chimeric nouse-luman immunoglobulins which recognise the human tumour antigen bound by anthody 1MG-1 (produced by bybridoma cell line ATCC HB 9912). The chimeric antibodies also have an antigen-binding site that complement-dependent cytolysis of target cells or antibody dependent cellular cytolysis of target cells or chimeric antibodies can be used for therapeutic purposes in the freateent of human capacity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Better MD,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-JUN-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-DEC-1998

The invention describes an antibody comprising a human content region and a variable region having specificity for the human through a formal content region bound by the 1887 antibody, where the 1807 is produced by cell lines the state of the state of the human tumour antigen. The same affinity as the 1891 as deposited with ACC, and the antibody has the same affinity as the 1891 as deposited with ACC, and the antibody has the same affinity as the 1807 in the human tumour antigen. The antibody, detecting a label and relating the detected label to the presence of a label-detectable antigen that an animal by contenting the antibody with a part of the animal supported of containing the antigen that the same antigen in an animal by contenting the antigen; and for killing cells supported of containing the antigen; and for killing cells surjected of a label for the presence of the antigen; and for killing cells and the same of the antigen; and for killing cells and the same of the antigen; and for killing cells and the same of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody for detecting antigen in animal or killing cella carrying antigen comprises human constant region and variable region having apecificity for human tumor antigen bound by ING-1 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Better MD,

The MALA elicits an anti-ganglicate response and produces anti-bodies which induce cyclocoxic destruction of cancer cells bearing the ganglicaides. It can be used for treation of cancer cells bearing the ganglicaides, It can be used as a immunomodulator to enhance anti-cancer immunity, suppress organ transplant rejection and enhance anti-cancer immunity, suppress organ transplant rejection and
